Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • “What's the weather in my city right now?” • “I keep re-typing the same cities in different apps.” • “Just tell me what to wear, not a list of numbers.”	THINKS • Raw temperature and humidity don't tell me how the day will feel. • Saving my favorite cities would save me time every day. • Is my account and personal data kept safe when I sign up?
DOES • Checks the weather for the same few cities several times a day. • Compares temperature, humidity and wind before heading out or travelling. • Searches online for clothing and activity tips after reading a forecast.	FEELS • Frustrated by switching apps and searching the same city again and again. • Overwhelmed by data-heavy screens with no plain-language advice. • Confident and relieved when a short summary and clear tips are one tap away.
