

Communication

Communication:

This document captures the communication approach used by the Weather & Location Analytics Backend team during project development and demonstration. It ensures that team members coordinate backend development, API integration, database configuration, testing and AI recommendation features clearly.

Communication Summary:

The team communicates around the core backend infrastructure, real-time weather service integration, location management, AI smart recommendations, MongoDB configuration, Express API routing and Postman testing. These areas correspond to the selected ideas in the brainstorming and prioritization document.

Date	15 March 2024
Team ID	6ab4d2876603573ccfb56348
Project Name	Weather & Location Analytics Backend
Maximum Marks	1 Mark

S.No	Communication Area	Purpose	Frequency / Stage	Responsible Member	Status
1	Team Coordination	Coordinate authentication, Express API routes and overall backend flow.	Regular team discussions	Dharshini A	Completed
2	Weather API Updates	Share weather-service integration progress, API responses and errors.	During development/testing	Savitha sree M	Completed
3	Location Feature Updates	Discuss saving and retrieving user favorite locations.	During feature development	Lavanya S	Completed
4	AI Feature Updates	Discuss AI-generated weather summaries and activity recommendations.	During AI integration	Keerthana S	Completed
5	Testing & Demo Updates	Share Postman results, issues and final demonstration flow.	Before demo	All Members	Completed
6	Documentation Updates	Coordinate project document and demonstration deliverables.	Before submission	Dharshini A	Completed
